

Construction / Features

Nexus Style 8301 Soot Blower Sets are compiled of a formulation of PTFE, Carbon, Glass Fibres and Molybdenum Disulphide specific to the OEM soot blower size requirements. The glass reinforcing offers superior strength, while the addition of carbon to the PTFE facilitates heat dissipation and the Molybdenum Disulphide increases lubrication. The precision moulded chevron rings with resilient tapered lips for positive sealing are split for easy installation. These chevron ring sets are designed to accommodate both reciprocating and rotational motion of the soot blower lance tubes

Applications

Water, steam, acids, alkalines, solvents and gasses.

Performance Capabilities

- Temperature Rating: Max 260°C
- Pressure Rating: Max 68 bar

Standard Sizes

Size requirements for quote: Inside Diameter, Outside Diameter, Total Set Height.
